STUDIO | WOOD FIRES

STOVAX

Fire Your Imagination

The fireplace is the heart of
your home, a centrepiece to
which friends and family gather...

CHOOSING YOUR STUDIO FIRE...

To own a Studio is to make a design statement that will become a heart-warming focal point to your home. There are several different styling options, from the simple Edge kits to the larger format Glass fascia, there are even several Freestanding models to ensure that there will be a Stovax just right for you.

Front cover: Studio 3 Edge + frame

STUDIO | HIGH EFFICIENCY FIRES

Stovax Studio fires feature the very latest cleanburn combustion systems, allowing them to burn logs with outstanding efficiency, resulting in more heat delivery into the room and less going up the chimney. This technological advancement is achieved by introducing preheated, secondary air into the firebox to burn the excess hydrocarbons in the smoke. Airwash air flow also helps keep the window clean, allowing you to enjoy the flames to the full.

Whether you choose an insert or freestanding fire, your Studio will offer you full control of the flame aesthetics. From a lazy roll to a lively roar, you can adjust your fire to suit your mood. The doors on the Studio 1 and 2 are hinged to the left whilst the larger Studio 3 door opens downwards, minimising the risk of ash falling beyond the hearth and into the room.

Studio Key Design Features

1. TCL (Technical Combustion Lining) High density thermal liner system
2. Heated air jets from cleanburn ports burn hydrocarbons in smoke
3. Airwash air flow for cleaner glass
4. Removable handle (Studio 1, 2 & 3) and door opening catch (Studio 1 & 2)
5. Convected and radiant heat
6. Convected heat ducting system outlet
7. Easy fit flue connection
8. Removable steel and TCL baffles
9. External air facility
10. Optional fan kit (inserts only)

* Illustration shows inserts with frame.

Studio Freestanding Heat Shields

These highly effective Heat Shields are available for all sizes of the Studio Freestanding models: Studio 1, 2 and 3, when fitted to the appliance. These fantastic additions allow a reduction of up to 62% in the distance to combustible materials at the rear of the appliance – reducing this to just 150mm.

Optional Fan Kit

Installing the optional fan kit into your Studio fire helps circulate combustion air, increasing burning efficiency and providing greater heat delivery into the room. With both manual and automatic settings, the fan kit is conveniently operated by the Studio Control Panel.

STUDIO | INSERT SIZE OPTIONS

Studio Inserts are available in three sizes, each with a wide variety of frame options. From glass to steel, there will be a frame to suit your own personal taste and style. Alternatively the Studio can be fitted with an Edge kit for a more minimalistic appearance. The first step is to identify the correct Studio size and heat output for your room, and then select the frame style to suit your home.

Studio Sizes

Studio 1 Edge + Kit

STUDIO | FREESTANDING

The Studio Freestanding incorporates the impressive firebox performance of an insert fire with the welcoming presence of a stove. Available with a number of optional extras to help you create the right look for your home, the Studio Freestanding can be hearth mounted or installed on a Bench. An optional heat shield kit can be fitted to the appliance in order to reduce the distance to combustible materials if required.

OTHER	Carbon Monoxide Detector

Please note: not all products pictured are available in Australia. List subject to change and availability.

* Rope seal packs includes glue and rope seal end tape

STUDIO | DIMENSIONS

An approved installer should undertake a site survey prior to purchase and must install any Studio Fire or Stove. Your Stovax retailer will be able to advise on this and, in particular, the use of high temperature (1300°C) plaster/screed in the area around Studio Inserts and Stoves. You may view/download complete installation instructions at our website - www.stovax.com.au. These diagrams cover some of the basic requirements. All fires and stoves should be installed by a competent person to the requirement of Building Regulations and include the fitting of adequate ventilation to ensure safe use. Usually older buildings do not need any additional ventilation for appliances up to 5kW, but modern houses will need additional ventilation in all cases. Some models can be fitted with an optional External Air Kit, or dedicated external air supply, offering a discreet and draught reducing solution to standard room venting. The diagrams and dimensions on these pages cover some of the basic requirements and are for initial information purposes only. **All product specifications are subject to change without notice.** Before installing refer to the relevant product manual for full and up to date information. Product pictures are a guide only, all wood fires must be installed as per AS 2918 :2001. All Stovax wood fires exceed stringent joint Australian and New Zealand Standards AS/NZS 4012/4013 (2014). Not all products are available at all outlets. Registered European Design 001169338.
